AV FQS Model

Period 1 vs Period 2 Rolling Outcome Comparison

5-Year Rolling Data | Nippon India Small Cap Fund & Mirae Asset Large & Mid Cap Fund

Period 1 = 5-year rolling outcomes computed from the fund's historical NAV data. Period 2 = the same outcomes, computed the same way, once the next 5 years of real data existed. Every number below comes directly from the production AV FQS model.

Note on "Match": this column is EXACT value equality. Continuous financial metrics essentially never land on the identical decimal twice, so 0/5 exact matches is expected, not a failure signal — the % Diff column is the meaningful read of how close Period 1 predicted Period 2.
